

QR code

QR code is short for Quick Response code, that is very similar to a bar code. The image is made from square dots in a unique configuration, that provides a specific information to the user. The code can lead you to a specific website, text, listening file, image, video. It is safe to use with the students, because it leads them only to that specific information that you want them to see or hear. It is easy to use, the students can work independently and it is a lot of fun. By the way, you can make your classroom and lessons much greener and eco-friendlier by not using too much paper for each activity.

Material required

- The QR code generated by the teacher / a smartphone or tablet with a camera and a QR code reading application / internet.

Possible uses

- **Reading Trail Stories**: the code gives the participants clues where to go, what to find next for finding out the right answer, the end of the story.
- **What's the word?**: you stick up a code to a learner's back, another student scans the code and describes the word found there to the person with the code.
- **Vocabulary cards**: there you can include the meaning, description, translation of a word, sentence examples, pronunciation, all at one place.

Possible restrictions

- Students without a smartphone/tablet can't use them, also internet connection is needed.

Is it inclusive for SLD?

Yes, but sometimes you have to accommodate the activities to the specific needs of your students.
