

# One for three

## Introduction

- **Level:** B1
- **Skills:** Writing, Reading
- **Topics:** Vocabulary – health, mind, body
- **Merging subjects:** Mathematics, Creative thinking, problem-solving, critical thinking

## The enigma

- **Keywords**

Students complete an online google quiz. They get a score for their correct answer – this number will lead them to the next step.

- **Toolbox**

Worksheet, several numbered envelopes (one of them has a secret message inside)

- **Description of the enigma**

Students go to the following link <https://forms.gle/X2divXMBfa9MS6Cf7> and complete a short online quiz. The quiz asks students to find the word that completes all the following sentences:

In this state the \_\_\_\_\_ may die in about twelve hours.

The next person we hire has to be as \_\_\_\_\_ as Job.

My daughter was \_\_\_\_\_ zero, now she's very generously given the virus to the rest of the family.

Students submit their answer and view their score to find out if they have guessed the correct word and how many points they have gained (e.g. 5). Later, they have to use this number and pick up the envelope with number 5 (the teacher had placed a pile of numbered envelopes next to the computer), open it and read the written message.

**Answer:** patient

# One for three

## Hints

The teacher/GM can decide how many chances students will have to choose the right answer and how they can help students in case they get stuck. An option would be to provide students with the definition of the missing word. Alternatively, students could be encouraged to look for the missing word in an online resource.

The hidden message in the envelope could describe the next enigma, reveal a code to unlock a lock or anything else the teacher decides to use.

## More information

## Possible restrictions

Digitally illiterate students might have difficulty completing the quiz.
